

Project Design Phase

Problem – Solution Fit Template

Date	25 June 2026
Team ID	
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The **Software Installation Request System** automates the process of requesting licensed software using **ServiceNow**. Employees submit requests through the **Service Catalog**, managers approve them, and the **Software Support Team** receives automated installation tasks. The system provides request tracking, notifications, role-based access, and faster software delivery with improved transparency and efficiency.

Purpose:

- ☐ Automate the complete software installation request process from submission to fulfillment.
- ☐ Reduce manual effort by implementing workflow-based approvals and task automation.
- ☐ Improve user experience through a centralized Service Catalog and real-time request tracking.
- ☐ Ensure secure and role-based processing using ServiceNow access controls and approval workflows.
- ☐ Increase operational efficiency, transparency, and compliance in managing licensed software requests.
- ☐ Provide a scalable solution that can be extended to other IT service requests in the future.

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? Employees who need licensed software for their official work. - All company employees (requesters) - Managers / Approvers - Software Support Team (Engineers) - IT Administrator	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? - Manual request process is time consuming - Multiple emails and follow-ups for approvals - No visibility of request status - Delayed software installation - Risk of non-compliance with software licensing	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? - Email requests - Spreadsheet tracking - Helpdesk tickets - Manual approvals - Direct requests to IT staff	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one, explore different sides. - Employees need to request licensed software for their work. - Managers need to review and approve requests. - IT needs to install software in a timely and controlled manner. - Organization needs visibility and compliance for software usage.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. - No centralized system for software requests - Manual approvals and communication - Lack of real-time tracking and notifications - Dependency on individuals - Need for compliance with licensed software policies and audits	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) - Employees raise request via email or helpdesk - Managers approve via email - IT installs manually - Employees follow up for status	Focus on BE, map into RC, understand RC
Identify strong TR & EM	3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. - New project or task requiring specific software - Onboarding to a new role - Existing software not working or expired - Audit or compliance requirement	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. - Centralized Software Installation Request System on ServiceNow Service Catalog - Automated approval workflow (Manager → IT Admin) - Automatic Catalog Task for Software Support Team - Real-time status tracking and notifications - Role-based access and audit logging - Ensures compliance with licensed software policies	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 - ServiceNow Service Portal - Employee Self-Service Portal - Email Notifications 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. - Walk-up requests to IT desk - Phone calls to IT support - Paper / offline approvals	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control – use it in your communication strategy & design. - Before: Frustrated, uncertain about approval and status, time-consuming process. - After: Easy request submission, quick approvals, visibility, and timely installation.
